

What is claimed is:

- 1 1. A biocompatible radiation shield for use with a radiation applicator system for a radiation source, said radiation applicator system including an applicator head defining a surface having a predefined shape and surface contour, said radiation shield comprising:
 - 4 a substantially thin, biocompatible material, adapted to conform to the shape of at least a
 - 5 portion of the surface contour of said applicator head.

Sub A

- 1 2. A biocompatible radiation shield according to claim 1 wherein said biocompatible
- 2 material includes at least one radiation blocking or absorbing material chosen from the group
- 3 including tungsten, gold, platinum, rhodium, iridium, tantalum and barium oxide.

Sub B

- 1 3. A biocompatible radiation shield according to claim 1 wherein said biocompatible
- 2 material includes at least one material chosen from the group including urethane, silicone
- 3 polyamides, and polystyrenes.

- 1 4. A biocompatible radiation shield according to claim 1 wherein at least a portion of said
- 2 biocompatible material is adapted to be coupled to said applicator head.

- 1 5. A biocompatible radiation shield according to claim 1, wherein the biocompatible
- 2 radiation shield is formed from a tungsten filled urethane material including approximately 60 to
- 3 90 percent tungsten by weight.

1 6. A biocompatible radiation shield according to claim 5, wherein the biocompatible
2 radiation shield is formed from a tungsten filled urethane material including approximately 80
3 percent tungsten by weight.

1 7. A radiation applicator system for use with a radiation source for facilitating the
2 application of a dose of radiation to a volume, said radiation applicator system comprising:

3 A) an applicator, substantially encasing a radiating probe of said radiation source,
4 said applicator including:

5 i) a shank having a proximate end and a distal end; and
6 ii) a head secured to said shank distal end and defining a surface for engaging
7 said area to receive said dose of radiation; and

8 B) an adapter, including:

9 i) a first coupler suited for mated engagement with said shank proximate
10 end; and

11 ii) a second coupler suited for mated engagement with said radiation source;
12 and

13 C) a biocompatible radiation shield coupled to at least a portion of said head.

1 8. A radiation applicator system according to claim 7 wherein:
2 said radiation source includes a housing having an elongated probe extending from said
3 housing and said probe is adapted for producing predefined dose profiles of radiation at a distal

4 end of said probe; and
5 said head is adapted for receiving said distal end of said probe whereby radiation
6 produced by said probe can be applied to an area adjacent said surface of said head.

*As
Claim*
1 9. A radiation applicator system according to claim 7 wherein said applicator head defines a
2 substantially spherical surface and said biocompatible radiation shield is formed in the shape of
3 at least a portion of said substantially spherical surface.

1 10. A radiation applicator system according to claim 7 wherein said applicator head defines a
2 substantially ellipsoidal surface and said biocompatible radiation shield is formed in the shape of
3 at least a portion of said substantially ellipsoidal surface.

1 11. A radiation applicator system according to claim 7 wherein said applicator head defines a
2 substantially cylindrical surface and said biocompatible radiation shield is formed in the shape
3 of at least a portion of said substantially cylindrical surface.

1 12. A radiation applicator system according to claim 7 further comprising a low energy filter,
2 coupled to said distal end of the radiation applicator, for attenuating low energy radiation emitted
3 from said probe.

1 13. A radiation applicator system according to claim 7 wherein said shank includes a

2 fastening element adapted for fastening said applicator to said radiation source at first predefined
3 position with respect to said radiation source.

1 14. A radiation applicator system according to claim 7 wherein the biocompatible radiation
2 shield is formed from a tungsten filled urethane material including approximately 60 to 90
3 percent tungsten by weight.

1 15. A kit for applying radiation to a volume, said kit comprising:
2 a radiation source adapted for producing a predefine radiation dose profile;
3 a plurality applicator systems and a corresponding plurality of biocompatible radiation
4 shields, each of said applicator systems including:

5 A) an applicator, substantially encasing a radiating probe of said radiation source,
6 said applicator including:
7 i) a shank having a proximate end and a distal end; and
8 ii) a head secured to said shank distal end and defining a surface for engaging
9 said area to receive said dose of radiation; and

10 B) an adapter, including:
11 i) a first coupler suited for mated engagement with said shank proximate
12 end; and

13 ii) a second coupler suited for mated engagement with said radiation source;
14 and

15 C) a biocompatible radiation shield coupled to at least a portion of said head.

1 16. A kit according to claim 15 wherein the applicator head of at least one of the plurality of
2 applicator systems is different in size or shape than the applicator head of at least one of the other
3 applicator systems from the plurality of applicator systems.

1 17. A kit according to claim 15 wherein at least one of the plurality of radiation shields is
2 different in size or shape than at least one of the other radiation shields.

1 18. A kit according to claim 15 wherein the applicator head of each of the plurality of
2 applicator systems is different in size or shape than the applicator head of each of the other
3 applicator systems.

1 19. A kit according to claim 15 wherein each of the plurality of radiation shields is different
2 in size or shape than the other radiation shields.

1 20. A kit according to claim 15 wherein at least one of said biocompatible radiation shields
2 includes at least one radiation blocking or absorbing material chosen from the group including
3 tungsten, gold, platinum, rhodium, iridium, tantalum, and barium oxide.
